DETAILED ACTION

Applicant's preliminary amendment filed February 18, 2000 (Paper No. 2) has been received and entered. Claims 1 and 13 were amended, consequently 1-24 are pending in the instant application.

Priority

Acknowledgment is made of applicant's claim for foreign priority based on PCT application filed July 31, 1998.

Oath/Declaration

It does not identify the post office address of each inventor. A post office address is an address at which an inventor customarily receives his or her mail and may be either a home or business address. The post office address should include the ZIP Code designation.

Claim Objections

Claim16 is objected to under 37 CFR 1.75(c) as being in improper form. It has been noted that the claim was amended to eliminate multiple dependency. However, the claim now recites "medium according to claim 15, characterized in that the activator consists of a hexosamine and/or a hexosaminidine and/or in that the inhibitor takes the characteristics of ".

Claim Rejections - 35 USC § 112

- 1. Claims 1,13-14 and 21-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which Applicant regards as the invention.
- A) Claim 13-14 are vague and indefinite in recitation of a "specific portion". One of skill in the art would be unable to determine the metes and bounds of such a limitation. For instance, what "specific portion" is being claimed by the applicant? Without a clear definition as to which specific portion the Applicant is referring to, one of skill in the art would be unable to replicate the claims. The claims are further indefinite in recitation of "marker potion". For the same reasons set forth above.
- B) Claims 1 and 21-22 are vague and indefinite in recitation of "advantageously essentially". One of sill in the art would be unable to determine the metes and bounds of such a limitation. For instance, does 40, 45, or 50 hours constitute a sufficient waiting period? Without a clear definition as to the exact waiting period, one of skill in the art would be unable to replicate the claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1645

2. Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Orenga in view of Pincus.

The claims are drawn to a culture medium specific for the identification and differentiation of Candida albicans and Candida tropicalis yeast.

Orenga et al. (US Patent 5,534,415) teach of a selective detection medium for the culture and detection of *Candida albicans* (See Entire Document). Orenga et al. further teach that the selective media comprises two substrates which can be hydrolyzed by enzymes from the hexosaminidase and glucosidase family. Orenga further teach of a medium characterized in that the medium is gelled and comprises peptones, yeast extract, glucose, and a phosphate buffer between 5 and 8.5.

Orenga does not teach of a culture medium specific for the identification and differentiation of Candida albicans and Candida tropicalis yeast.

Pincus (US Patent 4,874,695) teach of culturing *Candida* spp. in a medium which facilitates identification of the microorganism. Pincus further teach of using substrates which are capable of reacting with enzymes in culture and produce a distinctly colored reaction product.

Given that 1) Orenga et al. has taught of a selective detection medium for the culture and detection of *Candida albicans* and that 2) Pincus has taught of culturing yeast in a medium that facilitates selective detection of microorganisms such as yeast it would have been *prima facie* obvious to one of ordinary skill in the art at the time of the invention to make a culture medium specific for the identification and differentiation of *Candida spp.* One would have been motivated to make such a medium in view of the teachings of Pincus that a system which applies the technology of chromogenic substrates is needed for the cultivation and rapid identification of medically significant yeast isolates.
